EXTENSION CORDS

Extension cords are of the three wire type with approved connector caps to insure continuity of the tool grounding wire. The wire should be of the correct gauge to maintain adequate voltage to the tool. Recommended extension cords are listed on instruction sheets packed with each tool. The table below permits selection of an extension cord by referring to ampere rating shown on tool name plate.

No.	Length	Cord Gauge and Type	Max. Amp. Rating of Tool		Price
83 954	25'	18-3 SJ	10	E03T73	\$ 5.60

VENEER TRIM KITS

Precision veneer trimming equipment to do the job easier, faster and with maximum accuracy. Includes: Precision trim guide, special sub-base, combination straight and bevel trim bit, extra stationary nylon guide and 4 screws.

82 917 Kit for 81 045 Router
E13T25 Price \$19.90

82 918 Kit for 80 264 Router
E13T25 Price \$19.90

NO MORE TRIMMING WORRIES

Turning the depth adjusting knob (A) moves the Projection Arm (B) for precise adjustments. The Projection Arm can be adjusted to leave up to 1/4" overhang when making initial rough cuts. A turn of the smaller locking knob (C) locks the trim setting and prevents any variation in adjustments.

NEW GUIDE SHOE

82 947 Guide Shoe is an effective guide on an irregular work surface. The long flat surface of the guide glides over indentations in the work surface without affecting the depth of the trim cut. Can be used with either 82 917 or 82 918 Veneer Trim Kits.

SELL THE RIGHT BIT FOR THE RIGHT JOB

There are many different uses for Stanley Router Bits. In order to assist you in selection of the proper bit for the job, some of the most common applications are listed below:

"V" Grooving Bits: Excellent for lettering and sign work.

Straight Double End Bits: Used extensively for intricate line designs.

Straight Bits: For all general purpose routing (rabbeting, grooving, dadoing, etc.)

Shear Cut Bits: (LS) — Down cutting action. Produces extremely smooth edges. Excellent for grooving veneered work.

Shear Cut Bits: (RS) — Up cutting action, lifts chips out of groove permitting deep cuts to be made.

Veining Double End and Single End Bits: For decorative line work on any flat surface.

Core Box Bits: Especially effective in fluting flat surfaces (mantels and facades.)

Rounding Over Bits and Cove Bits: (Pilot) — For decorative edging and for drop leaf table joints.

Beading Bits and Roman Ogee Bits: (Pilot) — For decorative period furniture. Pilot guides router along edge of work.

Chamfering Bits: (Pilot) — For decorative edging and making concealed joints.

Dovetail Bits: For making dovetail.

Metal Cutting Straight Bits: For cutting soft metal, such as zinc or lead.

Spiral Bit: (Right Hand) — For trimming aluminum.

Combination Panel and Pilot Panel Bits: For trimming veneer and for templet panel routing.

Rabbeting Bits — One Inch Shank Length: (Pilot) — These bits equipped with pilot for making rabbeting cuts without use of router guide.

Long Shank — Straight Bits: For general purpose routing where nature of cut requires longer shank extension.

Bits for Hinge Mortising: Fast cutting bit for making mortises when cut is started from edge of work.

Straight Deep Cutting Bit: For making successively deeper cuts in design work. Shank of bit acts as guide after first cut is made.

Ogee Bits: For decorative cuts. Clamp straight edge or templet on the work and use as a guide for the outside edge of router base.

Many of the above Bits are available in Tungsten Carbide — either Carbide tipped or solid Carbide.

STANLEY SERVICE STATIONS

The following Stanley Service Stations are strategically located to assist you whenever you need parts or service for your Stanley Job/Master Portable Power Tools. They are authorized to conform to our guarantee policy.

When you send them a tool to be repaired, please prepay transportation charges and also send instructions as to what you want done. That will eliminate possible delay in a tool getting back to you in proper operating condition.

Stanley Power Tools that are listed with Underwriters carry the U. L. monogram on the nameplate.

STANLEY'S "120" GUARANTEE

Stanley Job/Master Power Tools are fully guaranteed. Over 120 years' experience stands behind every quality Stanley product. We will correct any defect due to faulty material or workmanship and will replace any part which proves defective and which has not been misused or improperly handled. We reserve the right to decline responsibility when repairs have been made or attempted by others. This is the only guarantee (under any warranty, express or implied). None other is authorized.

COPYRIGHT 1967

INSPECTED AND TESTED — Stanley Job/Master Power Tools are mechanically and electrically correct. Before leaving the factory all tools are carefully checked against specifications and rigidly inspected for material, machining, and accuracy. After inspection the tools are subjected to running tests.

Prices shown in this catalog are subject to change without notice.
